

Singapore IMDA Labeling

Country: Singapore

Label Name: IMDA

Overview

In Singapore, all radio communication devices must comply with the labeling requirements set by the Info-communications Media Development Authority (IMDA). Labeling ensures that devices meet Singapore's technical, regulatory, and cybersecurity standards, and that they are properly identified for compliance verification during sale, use, or importation

Label **MUST** be on...

- Product
- Manual
- Packaging

IMDA Compliance Label Example

The following is a sample format of the IMDA compliance label, which contains the following components:

1. ****IMDA Compliance Statement****: 'Complies with IMDA Standards'
2. ****Unique Equipment Registration Code (ERC)****: A unique identifier assigned by IMDA for tracking registered devices.
3. ****Dealer's License Number (DLN)****: Assigned to authorized telecommunications dealers.

Complies with IMDA Standards

AB 987654

Label size requirements: 17mm by 9mm

Placement of the IMDA Label

The IMDA compliance label must be displayed prominently on the device, its packaging, or user manual, ensuring it is easily visible to authorities and consumers. In some cases, where space is limited, e-labeling (electronic labels) may be allowed, provided that the information can be easily accessed within the device's software.

Suppliers must affix the "Complies with IMDA standards" label on all equipment registered with IMDA. This can be done on the device itself, the instruction manual, or the packaging of the

registered equipment, before displaying such equipment for sale. The label confirms that the equipment meets the necessary technical and regulatory standards set by IMDA for use in Singapore.

Since 4 April 2012, IMDA has allowed the use of ****electronic compliance labels**** on registered telecommunication equipment. Suppliers are permitted to display the

compliance label on the equipment's built-in display screen or in the softcopy of the equipment's instruction manual, as an alternative to traditional sticker labels. Suppliers must also ensure that the equipment packaging contains information for consumers on where to locate the electronic compliance label for verification.
